

DOUBLE THROUGHPUT DOUBLE THROUGHPUT

Through extensive research and development, Kalmar has successfully managed to double the amount of blocks handled by a single truck!

Brick and block handling is now much quicker, easier and safer with the Kalmar solution. In conjunction with a leading clamp manufacturer, Kalmar has developed a 4-pack block clamp for use with its range of industrial lift trucks. By using a larger capacity truck in conjunction with the new clamp, this new system can handle twice as many packs as standard block clamps, cutting handling times in half, speeding up vehicle loading times and greatly reducing the overall number of trucks needed, fuel use and tyre wear.

These handling solutions are for use with bricks, pavings, kerbs and any type of block, in capacities from 5 – 18 tonnes.

By using Kalmar's unique brick and block handling solutions you can enjoy the following benefits:

- **Double throughput** – twice the amount of work in the same amount of time.
- **Increased efficiency** – cut loading time in half.
- **Reduced running costs** – reduces fuel use, maintenance, tyre wear.
- **Reduced carbon footprint** – by reducing fuel usage, carbon emissions are directly cut.
- **Reduced fleet size** – greater efficiency reduces fleet size and speeds up amortisation.
- **For use in many applications** – can be used wherever bricks or blocks need to be handled.

Model DCE140-6

Kalmar makes light work of brick and block handling, developing innovative solutions that provide increased handling efficiency at reduced operating costs.

All Kalmar industrial lift trucks are built to the same exacting standards and we continue to provide the no-compromise service our customers have come to expect. Why not call us today and find out how we can double your throughput whilst saving you money!
